

PREPARED FOR DR RICK NGO · AUGUST 2026

We check in with your patients before and after their procedure

So they turn up ready, and so what goes wrong at home reaches your nurse rather than an emergency department.

Dr James Kurrle, Founder james@aesciahealth.com aesciahealth.com

What we do

Short check-ins on the patient’s phone. Every answer is read against our rules, and anything concerning reaches your nurse the same day.

How we ensure your list runs and patients get the best outcomes

The same case, run twice. Time moves left to right.

	At booking	2 weeks out	48 hours out	Day of	Days 1 to 3	Weeks 1 to 4
Today status quo	Instructions handed over. Nothing more until pre-admission	Staff start phone rounds. Voicemail, callbacks, repeat attempts	Confirmation calls. Anything found now is too late to fix	Cancellation discovered on arrival. Slot lost	Patient calls the office, or drives to an emergency room	Silence read as recovery. Recall slips
With Aescia	Patient onboards to Aescia, which • educates • prepares • verifies needs	Holds, fasting, escort and cardiology clearances confirmed automatically	Readiness verified. A drop-out is known while the slot can still be refilled	Full list, prepared patients	Symptoms triaged. Urgent items to a nurse the same day	Ensures the discharge plan is followed. Recall tracked and booked
Empty slot cost to refill	Trivial	Workable	Hard	Gone		

Pick your problems and price them →

Interactive. Choose what is real at your centers and it totals as you go. aesciahealth.com/tools/general-surgery/problems

What it does for a surgery center

One engine, different content per procedure. A general surgery day case is a colonoscopy minus the bowel prep.

Gastroenterology

Fewer wasted slots and better prepared patients

- Bowel preparation is one to three days of unsupervised patient work, and it is where most avoidable failure lives
- Prep quality checked before the patient travels, not discovered on the table
- Cancellations flagged early enough that the slot can still be refilled
- Surveillance recall tracked, so the three-year patient comes back

General surgery

Fewer day-of cancellations and safer recovery at home

- Fasting, escort and anticoagulant holds confirmed rather than assumed
- Day-of cancellations caught days early, while the list can still be rearranged
- Retention, pain and wound worries routed to a nurse instead of an emergency room
- The post-operative call burden lifted off your office

What I would like from you

The next step is a trial at a surgery center.

1. **Your read on this as a surgeon**, and any other operators you know who might have thoughts. Where you think it breaks, and what you would want to see before you let it near your list.
2. **An introduction to the person who makes decisions at your ASCs**. Thirty minutes, no commitment beyond hearing it.
3. **What do you measure at your centers?** Merit-based Incentive Payment System scores, quality registry submissions, patient experience, whatever the board looks at each month. If we can move one of those, that is the number worth talking about.

If this moves in Texas, we will be looking at advisory positions.
